Talking About ESSER: Ways to Build Community Trust and Keep the Focus on Results for Students

The pandemic has changed the relationship between districts and their school communities. When it comes to how a district is using its federal relief funds, more than ever we're finding that communities—and local media—are tuned in, with big expectations for how those big Elementary and Secondary School Emergency Relief (ESSER) investments are getting students back on track. Leaders who communicate clearly, honestly and often can build much-needed trust with their public and partners—from the teachers’ union and parents to advocacy groups and school boards. Smart communication on ESSER helps ensure all parties understand how and why spending decisions are made—not just what the decisions are in the district’s latest spending plan.

Here we map out six ways leaders can communicate about and help make the most of their ESSER investments:

**DO Talk about ESSER spending in per-pupil terms**

Describing investments with dollars in per-pupil terms clarifies the magnitude of spending and centers it on students. And it helps staff and the community better understand cost-equivalent tradeoffs—tradeoffs the district can show it has carefully considered. (We’ve shared some examples [here](#).) Concerns about waste in school spending are widespread (even among teachers), and communicating in dollar terms can help assure audiences that the district has weighed costs alongside value for students. For instance: “Our district received $1,000 per pupil in ESSER money. We’re spending $500 per pupil to extend the school year by two weeks using stipends to staff. And we’re spending $500 per pupil on 4-1 group tutoring for students lagging behind grade level so they can get back on track in math and reading.”
DO Talk about what you hope ESSER investments will do for students (and how you’ll measure progress)

While ESSER has broad allowable uses, the public clearly expects the money to help students’ learning. Come 2023, if districts can’t show what they’ve achieved for students, the spending choices will likely be judged a failure. That means measuring and communicating student progress is key. This doesn’t have to mean standardized test scores. If after-school enrichment spending is supposed to attract reluctant families back to in-person school, then leaders can measure and communicate the degree to which those students are returning. Districts could also measure monthly progress on key parameters like reading, math, student attendance and engagement. That clearly communicates to the public that the district is laser-focused on what matters and that staff know exactly where to focus their efforts.

DO Communicate about ESSER spending decisions often, both internally and externally

Communicating about ESSER spending isn’t a one-and-done task completed via news release when the district spending plan is approved. Those spending decisions can be expected to evolve over time, and that’s something that can be clearly messaged from the outset. Cultivating trust implies communicating regularly, without business lingo, with both the community and those inside the school system. Districts need not deliver all communications centrally; principals are ideal communicators with families and staff.

DO Encourage principals to talk with staff, families, and communities

Principals tend to be highly trusted in their communities. As such, they’re ideally positioned to help communicate the district’s ESSER spending decisions as well as gather local input and share it with district leaders. Given that few principals have had training in communications, we created a guide for leading conversations with their families and staff; principals can then use that feedback to press the district for solutions that will work for their students. In so doing, principals create a crucial feedback loop that strengthens communications and trust.
DO Invite feedback

Ideally, community input has already played a role in the district's federal relief spending decisions. Regardless, to foster trust, the district needs to invite feedback on how investments are going. (And, ideally, explain how that input influences the district's decisions moving forward.) As noted above, principals can play the role of inviting family and staff feedback, which gets channeled to district leaders.

DO Commit to revising spending plans based on what’s working and what's not

As the 2021–22 school year unfolds, with new interventions and investments, make clear that there will be opportunities to pivot on spending as needed, depending on whether programs are working or not. There's still time for district leaders to modify spending decisions that won't pass muster in the rearview mirror. Smart, ongoing communications can help ensure the public understands what's working, what's not and how spending decisions will benefit their community's students.

Here's the bottom line: Spending decisions made in the coming months will likely play out in communities for years to come. Taking time now to focus on students, communicate spending decisions and enable community dialogue can go a long way toward building trust and improving educational outcomes.
